

Your Amazing Immune System!

How Your Body Fights Germs

What Are Germs?

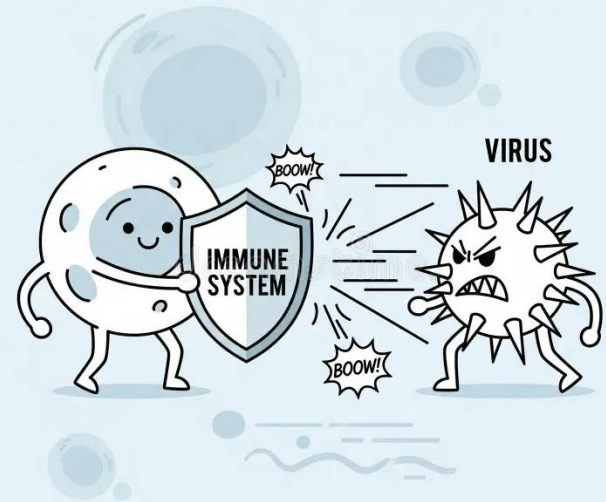

- ❖ Germs are tiny, microscopic living things like bacteria, viruses, and fungi that are too small to see without a microscope.
- ❖ When some germs get inside our bodies, they can eat our energy and cause sickness.
- ❖ However there are germs that are helpful like the ones that help digest food.

Your Body's Superhero!

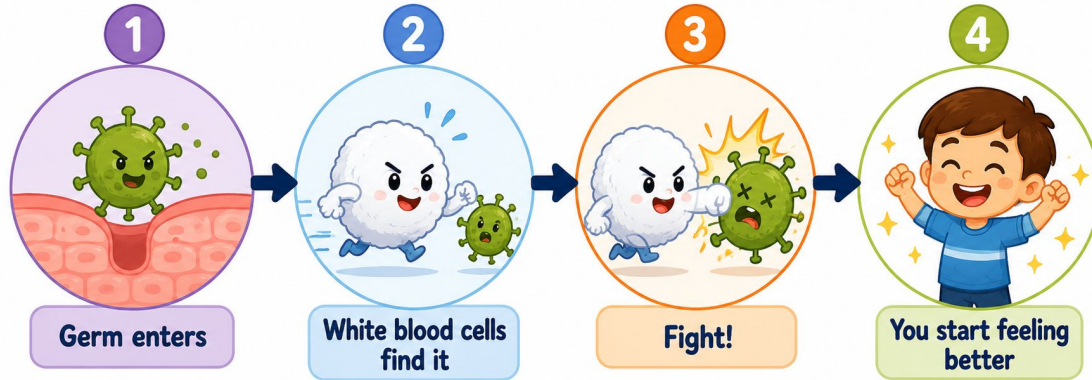

The White Blood Cell

- ❖ White Blood Cells are tiny living cells inside your blood that protect and kill bad germs that make you sick. Their roles are like a soldier's.
- ❖ There are different types of White Blood Cells. Some check your blood for germs, eat up the germs, or trap the germs to keep your body safe.
- ❖ White Blood Cells also remember the germs they beat, so you do not get too sick from it again
- ❖ White Blood Cells are made inside your bones and when sick, the body rapidly produces them.

How Does Your Body Fight Germs?

How Your Body Fights Germs

Did You Know?

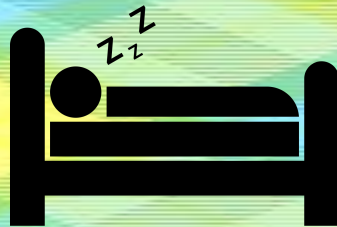

- ❖ Your body is fighting germs all the time even when you don't know or feel it.
- ❖ You have millions of white blood cells working together like a team to protect you.

How Can You Help Your Immune System?

1. Washing your hands helps remove germs before you can get sick.

2. Getting enough sleep gives your body time to rest and build up its defenses.

3. Eating healthy foods like fruits and vegetables give your body the nutrients it needs to stay strong.
